C0. Introduction

C0.1

(C0.1) Give a general description and introduction to your organization.

Comcast Corporation is a global media and technology company with three primary businesses: Comcast Cable, NBCUniversal and Sky. Our operations span the following business segments:

- Cable Communications: Consists of the operations of Comcast Cable, which is a leading provider of broadband, video, voice, wireless, and other services to residential customers in the United States under the Xfinity brand; we also provide these and other services to business customers and sell advertising.

- Media: Consists primarily of NBCUniversal’s television and streaming platforms, including national, regional and international cable networks; the NBC and Telemundo broadcast networks, NBC and Telemundo owned local broadcast television stations; and Peacock.

- Studios: Consists primarily of NBCUniversal’s film and television studio production and distribution operations.

- Theme Parks: Consists primarily of our Universal theme parks in Orlando, Florida; Hollywood, California; Osaka, Japan; and Beijing, China.

- Sky: Consists of the operations of Sky, one of Europe’s leading entertainment companies, which primarily includes a direct-to-consumer business, providing video, broadband, voice and wireless phone services, and a content business, operating entertainment networks, the Sky News broadcast network and Sky Sports networks.

Our other business interests consist primarily of the operations of Comcast Spectacor, which owns the Philadelphia Flyers and the Wells Fargo Center arena in Philadelphia, Pennsylvania, and other business initiatives.

Unless otherwise specified, references to “Comcast,” “our company,” “we,” “us,” and “our” in the responses reflect information for Comcast Corporation and its consolidated subsidiaries. References to Comcast Cable, NBCUniversal and Sky refer to information that is applicable only to such business.

In addition, this report includes estimates, projections and statements relating to our business plans, objectives and expected operating results and statements regarding ESG-related plans and goals that are “forward looking statements” within the meaning of the Private Securities Litigation Reform Act of 1995 and Section 21E of the Securities Exchange Act of 1934. These forward-looking statements generally are identified by the words “believe,” “project,” “expect,” “anticipate,” “estimate,” “intend,” “potential,” “strategy,” “future,” “opportunity,” “commit,” “plan,” “goal,” “may,” “should,” “could,” “will,” “would,” “will be,” “will continue,” “will likely result” and similar expressions. Forward-looking statements are based on current expectations and assumptions that are subject to risks and uncertainties that may cause actual results to differ materially. In evaluating these statements, you should consider various factors, including the risks and uncertainties we describe in the “Risk Factors” sections of our Forms 10-K and 10-Q and other reports we file with the Securities and Exchange Commission (“SEC”).

The inclusion of forward-looking and other statements in this report that may address our corporate responsibility initiatives, progress, plans and goals is not an indication that they are necessarily material to investors or required to be disclosed in our filings with the SEC. Such statements may contain estimates, make assumptions based on developing standards that may change and provide aspirational goals and commitments that are not intended to be promises or guarantees. Readers are cautioned not to place undue reliance on forward-looking statements or such other statements, which speak only as of the date they are made. We undertake no obligation to update or revise publicly any forward-looking or such other statements, whether because of new information, future events or otherwise.

As it relates to meeting our carbon neutral goal, and the decarbonization goals of society at large, there are myriad challenges that will need to be overcome. These challenges include certain factors beyond our control, including political, economic, regulatory and geopolitical conditions, the evolution of carbon offset markets, and limited large-scale public- and private-sector investments and innovations in technology and infrastructure. For example, a widescale clean energy transition will require expanded policies and market mechanisms, enhanced grid resiliency, and greater energy innovation. In addition, most next-generation technologies beyond renewables are still too costly for large-scale deployment or are not yet available. For example, certain types of electric vehicles, such as the bucket trucks used in our operations, do not exist today and may not be manufactured for years to come.

Visit www.comcastcorporation.com for more information about our company.

</thead>
<tbody>
<tr>
<td>Board-level committee</td>
<td>White active risk management is primarily the responsibility of our management; our Board understands the significant risks facing our company, including those related to relevant ESG issues, and exercises, as a whole and through its committees, an appropriate degree of risk oversight. Our management, with involvement and input from our Board, performs an annual company-wide enterprise risk management (ERM) assessment to identify key risks and to manage and mitigate the significant, strategic, operational, and legal risk areas for our company. Our executive management team has the overall responsibility for, and oversight of, this process, and an ERM steering committee composed of legal, financial, and business executives manages the process, with one or more senior business executives then monitoring and managing each of the identified risks. Regular business presentations and discussions throughout the year at the Board or its committees highlight significant relevant risks and exposures, including those listed below as core enterprise risks identified through our ERM process. Our Board and its committees review matters that may relate to climate change in a variety of ways, including: • The Governance and Corporate Responsibility Committee, as noted in its charter, periodically reviews and assesses the Company’s annual Impact Report and the Company’s significant environmental and social (E&amp;S) issues, risks and trends. • The Audit Committee, as noted in its charter, reviews the Company’s policies, practices and assessments with respect to significant business risks relating to business continuity (such as those risks arising from severe weather events). • The Board oversees risks associated with the Company’s reputation, which may include the Company’s climate-related activities, and as appropriate reviews our climate-related strategies and initiatives.</td>
</tr>

C1.2a

(C1.2a) Describe where in the organizational structure this/these position(s) and/or committees lie, what their associated responsibilities are, and how climate-related issues are monitored (do not include the names of individuals).

Comcast has two management committees that oversee governance of environmental sustainability for the enterprise – a senior executive level committee and an operational committee. The Executive Environmental Committee, chaired by Comcast’s Chief Financial Officer, Chief Legal Officer, and Chief Administrative Officer, meets periodically with members of the Environment Operating and Governance Committee (EOGC) to assess and manage climate-related risks and opportunities and review and approve environmental sustainability strategy, targets, and results. The EOGC, chaired by Comcast’s SVP of Corporate Strategy and Environmental Sustainability, defines strategies across our businesses to address climate-related risks, realize climate-related opportunities, and prioritize activities from a financial planning perspective that will have the most significant impact to help us attain our 2035 carbon neutral goal. This committee is comprised of executives from each business unit and across multiple functions including procurement, strategy, finance, accounting, legal and other operational functions. In addition, each business (Comcast Cable, NBCUniversal and Sky) has developed their own tailored climate-related strategies and initiatives given the nature of their respective businesses, which are also reviewed and discussed at the EOGC.

C1.3

(C1.3) Do you provide incentives for the management of climate-related issues, including the attainment of targets?

<table>

</tbody>
</table>
How does your organization define substantive financial or strategic impact on your business?

Comcast defines substantive financial or strategic impact using a definition of financial materiality for purposes of federal securities laws – whether there is a substantial likelihood that a reasonable investor would consider the information important in deciding how to vote or make an investment decision or, put another way, if providing (or not providing) such information would significantly alter the total mix of information made available.

Through our annual Enterprise Risk Management assessment process, senior leaders evaluate the likelihood and impact of possible climate-related risks, such as severe weather events and their impact on our revenue, operations and business continuity, and other financial planning impacts. This process contextualizes substantive financial impact at our consolidated enterprise level, and such climate-related risks are analyzed based on the same criteria used to assess the materiality of other types of risks to our business.

At present, we do not expect that the financial impact of attaining our 2035 carbon neutral goal for Scope 1 and Scope 2 emissions would have a material impact on our business, results of operations or financial condition. We also believe that, as of the date hereof, climate change has not had a direct or indirect material effect on our overall business, results of operations or financial condition. We have nonetheless provided responses to certain questions below solely for purposes of additional transparency.
(C2.2) Describe your process(es) for identifying, assessing and responding to climate-related risks and opportunities.

Value chain stage(s) covered
- Direct operations
- Upstream
- Downstream

Risk management process
- Integrated into multi-disciplinary company-wide risk management process

Frequency of assessment
- More than once a year

Time horizon(s) covered
- Short-term
- Medium-term

Description of process
Climate-related risks are identified and assessed as part of the Company’s Enterprise Risk Management (ERM) and Long-Range Planning (LRP) processes. The annual ERM process is driven by the Company’s ERM Committee, comprised of executive leadership across Comcast’s businesses (Comcast Cable, NBCUniversal and Sky) and co-chaired by the Chief Financial Officer and Chief Legal Officer. This Committee is responsible for identifying those risks that are most impactful to the Company and ensuring that mitigation strategies are identified and operationalized. The Comcast Audit Committee has oversight for the Company’s ERM process, and oversight for the resulting risks and mitigations is provided by the full Board of Directors. Risk identification and mitigation is iterative, including the scenarios that are modeled and considered for strategic investment as part of the Company’s LRP cycle. (The LRP process occurs over several months annually, and is used to model, plan and budget all aspects of the company in detail over a 5 year (short-term and medium-term) horizon.) The combination of the ERM and LRP processes determine which mitigation activities for the Company’s most impactful long-term risks are prioritized for short-term and medium-term funding. As mitigation strategies are planned and funded as part of the LRP and budget process, the results feed into the plans of the Company’s Internal Audit function, who independently validates progress in the general course of its audit work. Within the Company’s ERM process, environmental risks are not stand-alone ERM risks given the overall nature of our business. Instead, environmental-related risks are reflected within some of the Company’s top risks. For example, the Company’s Business Continuity Risk includes crisis planning, preparedness/testing and response across a variety of events, including weather events (hurricanes, floods, wildfires), natural disasters (earthquakes and tsunamis), pandemics, wide-spread power outages, supply chain disruption and cyber-attacks. Because risk management is considered an integral part of Company operations, environmental aspects of top ERM risks are managed by the same operational owners responsible for mitigating the specific ERM risks. This approach allows environmental issues to be considered alongside other operational factors when determining mitigation strategies and prioritization.

Value chain stage(s) covered

- Long-term

Description of process
Our Environment Operating and Governance Committee (EOGC), which is chaired by Comcast’s SVP of Corporate Strategy and Environmental Sustainability, defines strategies across our businesses to address climate-related risks, realize climate-related opportunities, and prioritize activities from a financial planning perspective that will have the most significant impact to help us attain our 2035 carbon neutral goal. This committee is comprised of executives from each business unit and across multiple functions including procurement, strategy, finance, accounting, legal and other operational functions. In addition, each business (Comcast Cable, NBCUniversal and Sky) has developed their own tailored climate-related strategies and initiatives given the nature of their respective businesses, which are also reviewed and discussed at the EOGC. The EOGC is developing an environmental and climate-related risk assessment process including discussion, identification, prioritization and assessment of the environmental risks across short, medium and long-term time horizons that are important to us, even if these risks are not significant to our overall company, operations or financial condition, and the risk mitigation activities that occur in the normal course of our business. These include discussions of physical risks, transition risks and other environmental risks.

C2.2a
(C2.2a) Which risk types are considered in your organization’s climate-related risk assessments?

<table>
<thead>
<tr>
<th>Risk Type</th>
<th>Relevance &amp; Inclusion</th>
<th>Please explain</th>
</tr>
</thead>
<tbody>
<tr>
<td>Current regulation</td>
<td>Relevant, always included</td>
<td>We consider relevant regulations based on operational realities such as industry opportunities and challenges, technological advancements, potential reputational impacts, severe weather, energy issues, and policy considerations year-round as they arise. We have a government affairs team that tracks relevant regulations. For example, the California Public Utilities Commission adopted a measure that will require 72 hours of network backup power for emergency situations such as electricity shutoffs.</td>
</tr>
<tr>
<td>Emerging regulation</td>
<td>Relevant, always included</td>
<td>We consider relevant regulations based on operational realities such as industry opportunities and challenges, technological advancements, potential reputational impacts, severe weather, energy issues, and policy considerations year-round as they arise. We have a government affairs team that tracks relevant emerging regulations. For example, we monitor the potential for state regulations relating to electric vehicle mandates.</td>
</tr>
<tr>
<td>Technology</td>
<td>Relevant, sometimes included</td>
<td>Comcast operates its business in numerous geographies around the world and is dependent on the existing energy infrastructure in those markets to support its operations. This reliance exposes us to several technology-related risks. For example, as we transition our energy portfolio to rely more heavily on renewable energy technology, that technology must A) be available in the quantities we require, and B) be dependable enough to support our significant load in order for us to achieve our climate-related aspirations.</td>
</tr>
<tr>
<td>Legal</td>
<td>Relevant, always included</td>
<td>Our legal team monitors potential risks related to all aspects of our business, including government regulation and litigation, including any that may arise related to climate. For example, an extreme weather event could lead to litigation and fines if we inadvertently contributed to damages suffered by others.</td>
</tr>
<tr>
<td>Market</td>
<td>Relevant, sometimes included</td>
<td>We require a significant amount of electricity to operate our cable network, theme parks, data centers, facilities, and other global operations, as well as fuel for our vehicle fleets. Increased energy costs, either through overall market dynamics or a shift to lower carbon sources of energy, could have an impact on the cost of operations. In 2021, overall energy costs made up about 1% of our total operating expenses, so overall impact to our financials has been limited so far. However, we monitor this as a potential risk and continue to pursue energy efficiency and reduction initiatives that reduce our risk of increased energy costs.</td>
</tr>
<tr>
<td>Reputation</td>
<td>Relevant, sometimes included</td>
<td>We closely monitor risks to our brand and reputation. For example, we could have unfavorable customer perception due to any perceived lack of, or inadequate speed of, action around climate or energy.</td>
</tr>
<tr>
<td>Acute physical</td>
<td>Relevant, always included</td>
<td>Acute-physical impacts, such as extreme weather events, can cause disruption to our theme park operations, our cable distribution network or our broadcasting infrastructure and network and may result in reduced or lost services for our customers. For example, our team monitors sites vulnerable to environmental risks assessed with the National Risk Index and tracks costs to address the risk, such as costs to repair storm-damaged plants.</td>
</tr>
<tr>
<td>Chronic physical</td>
<td>Relevant, always included</td>
<td>Chronic physical impacts may be considered based on operational realities such as industry opportunities and challenges, technological advancements, severe weather, and energy issues. For example, as California has historically seen an increase in severe weather events, such as drought and wildfires, we have moved some of our plants underground and have added standby power so we can power the local network in case local power companies turn off power.</td>
</tr>
</tbody>
</table>

(C2.3) Have you identified any inherent climate-related risks with the potential to have a substantive financial or strategic impact on your business?
Yes

C2.3a
(C2.3a) Provide details of risks identified with the potential to have a substantive financial or strategic impact on your business.

**Identifier**

</tr>
</tbody>
</table>

**Primary potential financial impact**
Increased direct costs

**Climate risk type mapped to traditional financial services industry risk classification**
<Not Applicable>

**Company-specific description**
As of the end of 2021, Comcast Cable’s cable network covered over 60 million homes and businesses throughout many designed market areas (DMAs) in the United States, including markets in the mid-Atlantic and Northeast (including Washington, DC, Philadelphia, New York, and Boston), the Southeast (including Miami and Atlanta), the Midwest (including Chicago, Detroit, Indianapolis, and Minneapolis/St. Paul), the Mountain West (including Denver and Salt Lake City), California (including San Francisco and Sacramento), the South West (including Houston) and the Northwest (including Portland and Seattle). Our advanced network carries approximately 663 petabytes of traffic on an average day based on a typical weekly snapshot. The telecommunications services provided to our residential and business customers depend on this network that is vulnerable to acute physical risks. The distributed nature of our network over a wide geographic area in the United States reduces the risk of any individual event. However, an increase in frequency and severity of extreme weather events, such as storms, flooding, and wildfires, may have a negative impact on our operations by impacting critical infrastructure that provides service to customers, causing a degradation or disruption of our network and associated products and services. These events may result in lost revenue and expenditures to repair or replace damaged properties, products and services and could lead to litigation and fines, including if we inadvertently contributed to damages suffered by others.

**Time horizon**
Short-term

**Likelihood**
Very unlikely

**Magnitude of impact**
Unknown

**Are you able to provide a potential financial impact figure?**
No, we do not have this figure

**Potential financial impact figure (currency)**
<Not Applicable>

**Potential financial impact figure – minimum (currency)**
<Not Applicable>

**Potential financial impact figure – maximum (currency)**
<Not Applicable>

**Explanation of financial impact figure**
Extreme weather events may result in lost revenue and expenditures to repair or replace damaged properties, products and services and could lead to litigation and fines, including if we inadvertently contributed to damages suffered by others. Example expenditure costs include temporary backup power to affected facilities to repair or maintain services, facilities repair costs when physical damage occurs, equipment repair or replacement in the case of damage, plant repairs required on our network, and the labor cost associated with these various types of repairs. While we have incurred costs and lost revenue for extreme weather events in the past, severe weather events to date have not had a material adverse effect on the Company’s results of operations or financial condition. For example, over the three-year period ended December 31, 2020, hurricanes and wildfires in California impacted our Cable Communications segment as follows: (i) capital expenditures of $1 million, $51 million and $82 million in 2020, 2019 and 2018, respectively; (ii) operating costs and expenses of $5 million and $13 million in 2020 and 2018, respectively; and (iii) $17 million of customer credits issued for service outages in 2018. For reference, in each of these years, these amounts, not including insurance reimbursements received, represented 1% or less of the corresponding Cable Communications segment capital expenditures, operating costs and expenses and revenue for such year. NBCUniversal segments during the three years ended December 31, 2020, were affected by multiple severe weather events, including earthquakes and typhoons in Japan in 2018 and a hurricane in Florida in 2019, that resulted in our theme parks closing for periods of time. The financial impact of park closures from these events was lost revenue opportunity, offset by lower variable costs from the park closures. We have included this climate-related risk as having the potential to have substantive financial or strategic impact should more frequent or more severe events occur, or if we were subject to litigation or fines related to such events.

**Cost of response to risk**
0

**Description of response and explanation of cost calculation**
In order to increase the reliability of our network and services through extreme weather events, Comcast invests annually in back-up equipment such as generators, batteries, and power supplies that enable the network to withstand electricity grid outages that may occur during extreme weather. We anticipate continuing to invest in hardening our critical infrastructure as climate change increases the risk of extreme weather events. This size of this investment is confidential; therefore, we have reported 0 as the cost to respond. However, we have estimated this figure for internal purposes. In 2021, we did not experience any acute physical events with substantive impact. However, a minor example of this event type is captured in the following case study: (Situation) In 2021, the northwestern United States experienced an extreme heat wave during the last week of June 2021, which had the potential to max out equipment and cause service disruption. (Task) To prevent negative impact to our customers in this region, we had to ensure the network would not be disrupted. (Actions) To prepare for events like this, proactive measures are taken including installing temporary reflective roofing systems and staging portable cooling units at key sites to mitigate heat load, and collaborating with HVAC vendors to ensure they are on stand-by for any needs. During the course of the heatwave, actions taken included powering down any unneeded equipment and ensuring network equipment and HVAC remained cool and operational. (Results) As a result of the investments in network resiliency and the actions of our business continuity team, the business suffered no equipment loss or failure, and no customers were impacted during that heat wave.

Opp1

**Where in the value chain does the opportunity occur?**
Direct operations

**Opportunity type**
Resilience

**Primary climate-related opportunity driver**
Participation in renewable energy programs and adoption of energy-efficiency measures

**Primary potential financial impact**
Reduced direct costs

**Company-specific description**
Comcast’s fiber optic/coax network in the United States provided broadband and cable services to more than 34 million residential and business customers at the end of 2021. Powering this network and cooling the critical equipment drives a significant portion of our electricity consumption and therefore our carbon footprint. (It should be noted, however, that our overall energy costs are relatively small relative to our overall operating costs and expenses, representing about 1% of such costs and expenses.)

To support continued business growth, we must increase capacity to support increasing consumer usage and extend the network to serve new geographies. Both require additional capital and operating costs and increase our electricity consumption and emissions footprint. To more efficiently grow our network, for several years Comcast has been developing and deploying class-leading network digitization and virtualization technologies to make the network smarter, faster and more reliable – creating the opportunity to reduce the direct capital and operating costs that would otherwise be incurred for network growth. Virtualization also allows us to make our network substantially more energy efficient by removing many analog physical components from the network and replacing them with more efficient, smaller, higher capacity digital technologies, orchestrated by a fully virtualized platform. This enables us to grow the capacity of the network to serve more customers with higher bandwidth, more reliability, and more flexibility, while minimizing increases in electricity consumption (i.e., at a relatively lower electricity per byte), capital investment, facility space, and cooling requirements that otherwise would stem from other types of network expansion. Specifically, we have developed software for our network headends and hubs that is more efficient and more flexible than the proprietary software historically used, and can operate on commodity hardware, eliminating the need for proprietary hardware that takes up more space, uses more electricity per byte, and is more costly. The space savings and energy efficiency of the new solutions is more than 50% compared to the current solutions. We have a multiyear, targeted plan to virtualize our U.S. network aligned with our growth projections. The result will be a more efficient and more flexible network able to serve a growing customer base with increasing capacity, performance and experience.

**Time horizon**

**Explanation of financial impact figure**
The estimated financial impact of this opportunity is confidential; therefore, we have not reported the financial impact. However, we have estimated this figure for internal purposes. More specifically, we assess the potential impact of this opportunity by estimating the avoided costs of increasing the capacity and expanding the geography of our network to accommodate growth projections over the next five years. About half of the savings comes from avoided software licenses that would have been required if we had not developed our own software solution. The other half comes from avoiding costs for new capital equipment and new physical space leases that would have been required. The range of the estimate is based on uncertainty of exactly what equipment would have been required in that buildout. In addition to the financial opportunity, because of the ~50% space intensity savings and the increased power density serving more customers associated with the virtualized solution, there will be a reduction of emissions intensity through this effort.

**Cost to realize opportunity**
0

**Strategy to realize opportunity and explanation of cost calculation**
The size of this investment is confidential; therefore, we have reported 0 as the cost to realize. However, we have estimated this figure for internal purposes. Case study: Connectivity is at the center of our customers’ lives. That’s why for years, Comcast Cable has made strategic investments in our network. (Situation) In order to support continued business growth and deliver products and services that meet customers’ evolving expectations, we must increase capacity to support increasing consumer usage as well as extend the network to serve new geographies. Increasing capacity and expanding geography both require additional capital and operating costs and increase our electricity consumption and our emissions footprint. (Task) Use new technology to enable increasing capacity and network expansion with lower relative impact on our physical footprint, our electricity consumption, and our emissions footprint, and therefore lower capital and operating costs than would have been incurred using traditional network technology. (Actions) We have started rolling out network virtualization across our U.S. network, with a targeted rollout plan over the next few years aligned with our growth projections. As we roll out network virtualization, we remove a significant number of analog physical components from the network and replace them with more efficient, smaller, higher capacity digital technologies, orchestrated by a fully virtualized platform. We use new software for our network headends and hubs that is more efficient and flexible than the proprietary software historically used. This new software can operate on commodity hardware, eliminating the need for proprietary hardware that took up more space, used more electricity, and was more costly. Altogether, this enables us to grow the capacity of the network at a relatively lower electricity per byte, to serve more customers with higher bandwidth, more reliability and more flexibility, while minimizing increases in electricity consumption, capital investment, facility space, and cooling requirements. (Results) In order to realize this opportunity, we plan to execute the network virtualization of our U.S. network during the next few years with a targeted rollout plan aligned with our growth projections. We began this rollout in 2020. The cost to realize this opportunity includes the capital cost to procure new commodity hardware as well as the investment in software development for our own software solutions.

C3.1

(C3.1) Does your organization’s strategy include a transition plan that aligns with a 1.5°C world?

Row 1

Transition plan
No, but our strategy has been influenced by climate-related risks and opportunities, and we are developing a transition plan within two years

Publicly available transition plan
<Not Applicable>

Mechanism by which feedback is collected from shareholders on your transition plan
<Not Applicable>

Description of feedback mechanism
<Not Applicable>

Frequency of feedback collection
<Not Applicable>

Attach any relevant documents which detail your transition plan (optional)
<Not Applicable>

Explain why your organization does not have a transition plan that aligns with a 1.5°C world and any plans to develop one in the future
Comcast has set a goal to be carbon neutral in our Scope 1 and 2 emissions by 2035, has integrated this goal into our strategy and developed an internal plan to achieve this goal, and already is and will continue to work towards this goal. In addition, we are working to develop science-based targets across our Scope 1, 2, and 3 emissions in the future. We consider the work above to be consistent with a transition plan for our carbon neutral goal, aligned with a 1.5°C world. However, our plan does not meet all of the specific criteria laid out by CDP in its definition of a transition plan.

Explain why climate-related risks and opportunities have not influenced your strategy
<Not Applicable>

C3.2

(C3.2) Does your organization use climate-related scenario analysis to inform its strategy?

<table>
<thead>
<tr>
<th>Use of climate-related scenario analysis to inform strategy</th>
<th>Primary reason why your organization does not use climate-related scenario analysis to inform its strategy</th>
<th>Explain why your organization does not use climate-related scenario analysis to inform its strategy and any plans to use it in the future</th>
</tr>
</thead>
<tbody>
<tr>
<td>No, and we do not anticipate doing so in the next two years</td>
<td>Other, please specify (See explanation)</td>
<td>Various climate-related risks are components of several of the Company’s enterprise risks (such as severe weather events impacting business continuity risk). As such, climate-related risks have been managed by the operational owners of those risks so that mitigation is considered within the broader risk mitigation plan. At this time, Comcast has not identified climate-related risk as a stand-alone risk for the enterprise fully independent of operations, and therefore, has not performed a stand-alone qualitative or quantitative climate-related scenario analysis.</td>
</tr>
</tbody>

<tbody>
<tr>
<td></td>
<td></td>
<td>Our supply chain could be affected by climate change, which could increase the costs of providing our products and services to our customers. With increasing climate-related risks such as fires, floods, and droughts that could impact our network and customers, Comcast Cable tracks potential extreme weather events and drives mitigation plans to build resiliency into our supply chain in partnership with our key vendors. Comcast strategically focuses on three core tenets: designing best-in-class products (e.g., rugged outdoor equipment), building appropriate redundancies into our supplier base (e.g., multiple component and manufacturing sources, contractual protections, etc.), and diversifying our warehouse and factory locations across North America and Asia. The time horizon for our approach is focused on long-term risk mitigation, backed by short- and medium-term actions. In addition, in 2021, Comcast launched its Code of Conduct for Suppliers and Business Partners, which includes key provisions around business continuity and sustainable practices.</td>

New

**Is this a science-based target?**

No, but we anticipate setting one in the next 2 years

**Target ambition**

<Not Applicable>

**Please explain target coverage and identify any exclusions**

This target is our goal to become Carbon Neutral for Scope 1 and Scope 2 market-based emissions by 2035. The target is company-wide and covers 100% of our known Scope 1 and Scope 2 emissions. We have not set an explicit reduction goal; however, our priority is to reduce emissions first and then offset any remaining emissions. We include emissions or removals from bioenergy within the target boundary, however to date we have a negligible amount of emissions or removals from bioenergy. Comcast continues to evaluate the relevancy of bioenergy emissions and may adjust our calculation processes and target boundary if the amount of bioenergy used by the organization increases.

**Plan for achieving target, and progress made to the end of the reporting year**

We have set the goal to be carbon neutral by 2035 for Scope 1 and Scope 2 market-based emissions across our entire global operations. To meet our goal, we are first focused on reducing our emissions primarily by: 1) Sourcing renewable and clean energy - We will shift to more zero carbon, renewable electricity by partnering with local utilities and investing in new renewable energy through power purchase agreements and securing renewable energy credits. 2) Improving our energy efficiency - Across our buildings, network, vehicle fleets, production studios, and theme parks, we will continue to develop and implement projects to improve energy efficiency. Through year-end 2021, we have reduced our company-wide Scope 1 and Scope 2 market-based emissions by 28% compared to our 2019 baseline. Increasing use of renewable energy, reducing overall energy use, and the greening of the U.S. electricity grid have been the primary contributors to our reduction so far.

**List the emissions reduction initiatives which contributed most to achieving this target**

CDP
C4.3c  What methods do you use to drive investment in emissions reduction activities?

<table>
<thead>
<tr>
<th>Method</th>
<th>Comment</th>
</tr>
</thead>
<tbody>
<tr>
<td>Employee engagement</td>
<td>Comcast Cable’s operational fleet includes over 25,000 Xfinity vans, trucks, SUVs, and sedans. Every Minute Matters, an employee engagement campaign launched in 2020, guides and encourages Comcast Cable fulfilment technicians, supervisors, and managers to reduce idle time in their vehicles, reducing fuel consumption and emissions by turning off the engine when finishing job tasks or loading equipment.</td>
</tr>
<tr>
<td>Internal finance mechanisms</td>
<td>With purchased electricity accounting for the largest portion of our Scope 1 and 2 emissions, we are taking action to invest in clean, renewable energy. In 2021, we signed Comcast’s first large-scale renewable energy agreement to purchase 250 megawatts of solar electricity that will power approximately 12% of our current U.S. operations with clean, renewable energy beginning in 2025. This project marks the first of many major investments in renewables that are already underway or on the immediate horizon. We prioritize these types of investments through internal finance mechanisms because they not only address our largest source of emissions but also are impactful actions we can take at scale.</td>
</tr>
<tr>
<td>Financial optimization calculations</td>
<td>As part of our standard financial investment decision making processes, we factor in the cost savings and other financial benefits (e.g., tax incentives) associated with investing in more fuel/energy efficient technologies in our operations. We prioritize projects that meet our internal financial expectations, deliver the greatest marginal carbon reductions, and achieve optimum performance.</td>
</tr>

Comment

During 2021, Comcast undertook meaningful efforts to calculate its Scope 3 emissions starting from a 2019 base year for the full enterprise. However, given inherent data limitations and inconsistent estimation techniques employed among various companies, readers are cautioned to not place any undue reliance on our estimated Scope 3 emissions. Comcast used a spend-based method; using expenditure data for all company divisions, to calculate emissions from purchased goods, services, and capital goods. A mix of approaches were utilized to determine the emission factors to map to spend. For select suppliers, supplier-specific emission factors were calculated using the most recently available CDP Supplier submissions, vendors surveys, or supplemental research. The supplier’s Scope 1 emissions, Scope 2 emissions, upstream Scope 3 emissions, and revenue were utilized to create a supplier-specific emission factor. Otherwise, spend was multiplied by a cradle-to-gate emission factor from the U.S. EPA Supply Chain GHG Emission Factors for US Commodities and Industries v1.1 (Revised January 2022), or the OpenLCA lifecycle assessment software, with emission factors mapped to spend via the supplier’s sector or the category of the purchased good or services. Emission factors were also updated per the latest inflation rates. Spend on emissions covered in Scope 1, Scope 2 or other Scope 3 categories were excluded from the analysis (e.g., transportation and energy spend). Spend related to Programming, Licensed Content, and Sports Rights are also excluded from the analysis. This category includes emissions associated with Category 2: Capital Goods.

Comment

During 2021, Comcast undertook meaningful efforts to calculate its Scope 3 emissions starting from a 2019 base year for the full enterprise. However, given inherent data limitations and inconsistent estimation techniques among companies, readers are cautioned to not place any undue reliance on our estimated Scope 3 emissions. Comcast used an average-data method to calculate upstream emissions from fuels and energy consumed in its operations. Activity data was sourced from the fuel and energy quantities reported in Comcast’s Scope 1 and 2 market-based emissions footprint. Emissions for Well-to-Tank (WTT) Generation for fuels, electricity, and heat and steam were calculated using the UK Government (DEFRA/BEIS) Greenhouse Gas Conversion Factors for Company Reporting 2019 (Revised July 2020) emission factors. Emissions for Transportation and Distribution (T&D) Losses and Well-to-Tank (WTT) T&D Losses for electricity, heat and steam were calculated using the IEA Statistics Data Service: 2018 Emission Factors (September 2020), the UK Government (DEFRA/BEIS) Greenhouse Gas Conversion Factors for Company Reporting 2019 (Revised July 2020), and the U.S. EPA 2018 Emissions & Generation Resource Integrated Database (“eGRID2018”) (March 2020).

During 2021, Comcast undertook meaningful efforts to calculate its Scope 3 emissions starting from a 2019 base year for the full enterprise. However, given inherent data limitations and inconsistent estimation techniques among companies, readers are cautioned to not place any undue reliance on our estimated Scope 3 emissions. Comcast used a mix of methods to calculate emissions from waste generated in operations. Where possible, a waste type-specific method was used, otherwise a spend-based method was used. For the waste type-specific method, emissions were calculated using the U.S. EPA Climate Leaders, Emissions Factors for Greenhouse Gas Inventories: Table 9 (April 2021) or the UK Government (DEFRA/BEIS) Greenhouse Gas Conversion Factors for Company Reporting 2019 (Revised July 2020). For the spend-based method, emissions were calculated using the Greenhouse Gas Protocol Scope 3 Evaluator Quantis Tool. Spend on waste that was included in Category 5: Waste Generated in Operations, was excluded from Category 1: Purchased Goods and Services. In instances where the related spend cannot be identified and excluded from the analysis for Category 1: Purchased Goods and Services, emissions included in Category 5: Waste Generated in Operations were removed from the emissions estimated in Category 1: Purchased Goods and Services. Waste from offices, retail locations, as well as Comcast’s various recycling programs were included in this category.

During 2021, Comcast undertook meaningful efforts to calculate its Scope 3 emissions starting from a 2019 base year for the full enterprise. However, given inherent data limitations and inconsistent estimation techniques among companies, readers are cautioned to not place any undue reliance on our estimated Scope 3 emissions. Comcast used a mix of methods to calculate emissions from business travel. A distance-based, fuel-based, hotel nights-based, or spend-based method was used dependent on the data available. Emissions from commercial air travel, rail travel, car rentals, and mileage reimbursements were calculated using mileage-based activity data aggregated by Comcast and its travel service providers, using emission factors from the U.S. EPA Climate Leaders, Emissions Factors for Greenhouse Gas Inventories: Table 10 (April 2021) and the UK Government (DEFRA/BEIS) Greenhouse Gas Conversion Factors for Company Reporting 2019 (Revised July 2020). Private flight emissions were calculated using flight hours, a gallon per hour rate from the FAA to estimate fuel usage, and the appropriate emission factor from the UK Government (DEFRA/BEIS) Greenhouse Gas Conversion Factors for Company Reporting 2019 (Revised July 2020) and U.S. EPA Climate Leaders, Emissions Factors for Greenhouse Gas Inventories: Table 10 (April 2021). Hotel emissions were calculated using the number of room nights and emission factors from the UK Government (DEFRA/BEIS) Greenhouse Gas Conversion Factors for Company Reporting 2019 (Revised July 2020), where applicable, or the GreenView Hotel Footprinting Tool - Heat Map of Carbon Emissions per Room Night (November 2020). Otherwise, spend was multiplied by a cradle-to-gate emission factor from the U.S. EPA Supply Chain GHG Emission Factors for US Commodities and Industries v1.1 (Revised January 2022) or the OpenLCA lifecycle assessment software, with emission factors mapped to spend via the category of the purchased services. Emission factors were also updated per the latest inflation rates. Spend that was categorized as business travel spend was included in Category 6: Business Travel and excluded from Category 1: Purchased Goods and Services.
**Scope 3 category 7: Employee commuting**

**Base year start**  
January 1 2019

**Base year end**  
December 31 2019

**Base year emissions (metric tons CO2e)**  
305359

**Comment**  
During 2021, Comcast undertook meaningful efforts to calculate its Scope 3 emissions starting from a 2019 base year for the full enterprise. However, given inherent data limitations and inconsistent estimation techniques among companies, readers are cautioned to not place any undue reliance on our estimated Scope 3 emissions. Comcast used an average-data method to estimate emissions from employee commuting. Survey data collected from employees was utilized for the UK & Ireland employees of the Sky division. For other Sky employees, distances and modes of travel were estimated using national travel surveys. Emission factors from the UK Government (DEFRA/BEIS) Greenhouse Gas Conversion Factors for Company Reporting 2019 (Revised July 2020) were utilized. For all other Comcast divisions, employee commuting emission estimates were derived from the Greenhouse Gas Protocol Scope 3 Evaluator Quantis Tool.

**Scope 3 category 8: Upstream leased assets**

**Base year start**

**Comment**  
During 2021, Comcast undertook meaningful efforts to calculate its Scope 3 emissions starting from a 2019 base year for the full enterprise. However, given inherent data limitations and inconsistent estimation techniques among companies, readers are cautioned to not place any undue reliance on our estimated Scope 3 emissions. Comcast used an average-data method and spend-based method to calculate emissions in this category which includes emissions from leased real estate where Comcast does not have operational control. For the average-data method, emissions from electricity, natural gas, refrigerants, and blended refrigerants were determined by multiplying the leased asset’s square footage by a usage intensity factor based on facilities in Comcast’s Scope 1 and 2 emissions. We also used emission factors from the IEA Statistics Data Service: 2018 Emission Factors (Sept 2020) and the U.S. EPA 2018 Emissions & Generation Resource Integrated Database (“eGRID2018”) (Mar 2020) to estimate emissions from electricity, emissions factors from the U.S. EPA Climate Leaders, Emissions Factors for Greenhouse Gas Inventories: Table 1 (Apr 2021) and the U.S. EIA Commercial Buildings Energy Consumption Survey (May 2016) to estimate emissions from natural gas, and emissions factors from the U.S. EPA Climate Leaders, Emissions Factors for Greenhouse Gas Inventories: Table 11 & Table 12 (Apr 2021) to estimate emissions from refrigerants. For the spend-based method, a mix of approaches are utilized to determine the emission factors to map to spend. For select suppliers, supplier-specific emission factors (based on Scope 1, Scope 2, and upstream Scope 3) were calculated using the most recently available CDP Supplier submissions, vendors surveys, or supplemental research. Otherwise, spend was multiplied by a cradle-to-gate emission factor from the U.S. EPA Supply Chain Greenhouse Gas Emission Factors for US Industries and Commodities (Jan 2022), or the OpenLCA lifecycle assessment software, with emission factors mapped to spend via the category of the purchased services. Emission factors were also updated per the latest inflation rates. Spend that was categorized as upstream leased assets was included in Category 8: Upstream Leased Assets and excluded from Category 1: Purchased Goods and Services.

**Scope 3 category 9: Downstream transportation and distribution**

**Base year start**  
January 1 2019

**Base year end**  
December 31 2019

Comment
During 2021, Comcast undertook meaningful efforts to calculate its Scope 3 emissions starting from a 2019 base year for the full enterprise. However, given inherent data limitations and inconsistent estimation techniques among companies, readers are cautioned to not place any undue reliance on our estimated Scope 3 emissions. Comcast used the product-specific method for direct use phase emissions to calculate emissions from the use of sold products. Included in this category were the estimated lifetime of emissions from products sold directly by Comcast entities, as well as in-year emissions of devices leased or sold via a subscription-based service model by the Sky division. For sold devices, the total volume of devices sold in the reporting year was multiplied by either a model-specific or average annual energy usage, an estimated lifetime, and an emission factor from the U.S. EPA 2018 Emissions & Generation Resource Integrated Database ("eGRID2018") (March 2020), the IEA Statistics Data Service: 2018 Emission Factors (September 2020) or the UK Government (DEFRA/BEIS) Greenhouse Gas Conversion Factors for Company Reporting 2019 (Revised July 2020) depending on the country of sale. For leased devices, the average volume of active devices across the year was multiplied by either a model-specific or average annual energy usage and an emission factor referenced above, depending on the country where the device resided.

Scope 3 category 12: End of life treatment of sold products

Base year start
January 1 2019

Base year end
December 31 2019

Base year emissions (metric tons CO2e)
7651

Comment
During 2021, Comcast undertook meaningful efforts to calculate its Scope 3 emissions starting from a 2019 base year for the full enterprise. However, given inherent data limitations and inconsistent estimation techniques among companies, readers are cautioned to not place any undue reliance on our estimated Scope 3 emissions. Comcast used a waste type-specific method on all sold products, as well as leased devices that were never returned to Comcast. Waste type-specific emissions were taken from LCAs specific to the device where applicable or calculated using an estimated device weight and an emission factor from the U.S. EPA Climate Leaders, Emissions Factors for Greenhouse Gas Inventories: Table 9 (April 2021) or the Green Story Inc: "Comparative Life Cycle Assessment (LCA) of second-hand vs new clothing" (May 2019).

Scope 3 category 13: Downstream leased assets

Base year emissions (metric tons CO2e)
4262798

Comment
During 2021, Comcast undertook meaningful efforts to calculate its Scope 3 emissions starting from a 2019 base year for the full enterprise. However, given inherent data limitations and inconsistent estimation techniques among companies, readers are cautioned to not place any undue reliance on our estimated Scope 3 emissions. Comcast used the product-specific method for direct use phase emissions to calculate downstream leased assets emissions for the Comcast Cable division’s customer premise equipment (CPE) (e.g., gateways and set-top boxes). The average volume of active devices in the reporting year was multiplied by either a model-specific or average annual energy usage and an emission factor from the U.S. EPA 2018 Emissions & Generation Resource Integrated Database ("eGRID2018") (March 2020). Emissions from leased facilities and subleased vehicles were also included in this category. Leased facilities emissions were calculated using the same average-data method as leased buildings from Category 8: Upstream Leased Assets. Subleased vehicle emissions were calculated using a distance-based method by estimating the total number of miles driven based on the number of days each vehicle type was rented during the reporting year. This mileage was then multiplied by the appropriate emission from the U.S. EPA Climate Leaders, Emissions Factors for Greenhouse Gas Inventories: Table 10 (April 2021).

Relevant, calculated

Emissions in reporting year (metric tons CO2e)
3946691

Emissions calculation methodology
Supplier-specific method
Spend-based method

Percentage of emissions calculated using data obtained from suppliers or value chain partners
10

Please explain
Comcast used a spend-based method, using expenditure data for all company divisions, to calculate emissions from purchased goods, services, and capital goods. However, given inherent data limitations and inconsistent estimation techniques among companies, readers are cautioned to not place any undue reliance on our estimated Scope 3 emissions. A mix of approaches were utilized to determine the emission factors to map to spend. For select suppliers, supplier-specific emission factors were calculated using the most recently available CDP Supplier submissions, vendors surveys, or supplemental research. The supplier Scope 1 emissions, Scope 2 emissions, upstream Scope 3 emissions, and revenue were utilized to create a supplier-specific emission factor. Otherwise, spend was multiplied by a cradle-to-gate emission factor from the U.S. EPA Supply Chain Greenhouse Gas Emission Factors for US Industries and Commodities (January 2022), or the OpenLCA lifecycle assessment software, with emission factors mapped to spend via the supplier’s sector or the category of the purchased goods or services. Emission factors were also updated per the latest inflation rates. Spend on emissions covered in Scope 1, Scope 2, or other Scope 3 categories were excluded from the analysis (e.g., transportation and energy spend). Spend related to Programming, Licensed Content, and Sports Rights were also excluded from the analysis. This category included emissions associated with Category 2: Capital Goods.

Percentage of emissions calculated using data obtained from suppliers or value chain partners
1

Please explain
Comcast used an average-data method to calculate upstream emissions from fuels and energy consumed in its operations. However, given inherent data limitations and inconsistent estimation techniques among companies, readers are cautioned to not place any undue reliance on our estimated Scope 3 emissions. Activity data was sourced from the fuel and energy quantities reported in Comcast’s Scope 1 and 2 market-based emissions footprint. Emissions for Well-to-Tank (WTT), Generation for fuels, electricity, heat and steam were calculated using the UK Government (DEFRA/BEIS) Greenhouse Gas Conversion Factors for Company Reporting 2021 (Revised January 2022) emission factors. Emissions for Transportation and Distribution (T&D) Losses and WTT T&D Losses for electricity, heat and steam were calculated using the IEA Statistics Data Service: 2019 Emission Factors (September 2021), the UK Government (DEFRA/BEIS) Greenhouse Gas Conversion Factors for Company Reporting 2021 (Revised January 2022), and the U.S. EPA 2019 Emissions & Generation Resource Integrated Database ("eGRID2019") (February 2021).

<td>0</td>
</tr>
</tbody>
</table>

Please explain
Comcast used a mix of methods to calculate emissions from waste generated in operations. However, given inherent data limitations and inconsistent estimation techniques among companies, readers are cautioned to not place any undue reliance on our estimated Scope 3 emissions. Where possible, a waste type-specific method is used, otherwise a spend-based method is utilized. For the waste type-specific method, emissions were calculated using the U.S. EPA Climate Leaders, Emissions Factors for Greenhouse Gas Inventories: Table 9 (April 2021) or the UK Government (DEFRA/BEIS) Greenhouse Gas Conversion Factors for Company Reporting 2021 (Revised January 2022). For the spend-based method, emissions were calculated using the Greenhouse Gas Protocol Scope 3 Evaluator Quantis Tool. Spend on waste that was included in Category 5: Waste Generated in Operations, was excluded from Category 1: Purchased Goods and Services. In instances where the related spend cannot be identified and excluded from the analysis for Category 1: Purchased Goods and Services, emissions included in Category 5: Waste Generated in Operations were removed from the emissions estimated in Category 1: Purchased Goods and Services. Waste from offices, retail locations, as well as Comcast’s various recycling programs were included in this category.

Business travel

Emissions in reporting year (metric tons CO2e)
6447

Emissions calculation methodology
Waste-type-specific method

Percentage of emissions calculated using data obtained from suppliers or value chain partners
0

Please explain
Comcast used a waste type-specific method, on all sold products as well as leased devices that were never returned to Comcast. However, given inherent data limitations and inconsistent estimation techniques among companies, readers are cautioned to not place any undue reliance on our estimated Scope 3 emissions. Waste type-specific emissions were taken from LCAs specific to the device where applicable or calculated using an estimated device weight and an emission factor from the U.S. EPA Climate Leaders, Emissions Factors for Greenhouse Gas Inventories: Table 9 (April 2021) or the Green Story Inc: “Comparative Life Cycle Assessment (LCA) of second-hand vs new clothing” (May 2019).

Downstream leased assets

Evaluation status
Relevant, calculated

Emissions in reporting year (metric tons CO2e)
4153313

Emissions calculation methodology
Average product method
Distance-based method

Methodology for direct use phase emissions, please specify (For equipment on customer premises (CPE), average volume of active devices multiplied by either a model-specific or average annual energy usage and the eGrid average emission factor for the U.S.)

Percentage of emissions calculated using data obtained from suppliers or value chain partners
0

Please explain
Comcast used the product-specific method for direct use phase emissions to calculate emissions from downstream leased assets for the Comcast Cable division’s customer premise equipment (CPE) (e.g., gateways and set-top boxes). However, given inherent data limitations and inconsistent estimation techniques among companies, readers are cautioned to not place any undue reliance on our estimated Scope 3 emissions. The average volume of active devices in the reporting year was multiplied by either a model-specific or average annual energy usage and an emission factor from the U.S. EPA 2019 Emissions & Generation Resource Integrated Database (“eGRID2019”) (February 2021). Emissions from leased facilities and subleased vehicles were also included in this category. Leased facilities emissions were calculated using the same average data method as leased buildings from Category 8: Upstream Leased Assets. Subleased vehicle emissions were calculated using a distance-based method by estimating the total number of miles driven based on the number of days each vehicle type was rented during the reporting year. This mileage was then multiplied by the appropriate emission from the U.S. EPA Climate Leaders, Emissions Factors for Greenhouse Gas Inventories: Table 10 (April 2021).

Scope 2 figure used
Market-based

% change from previous year
28

Direction of change
Decreased

Reason for change
During 2021, our efforts to reduce our greenhouse gas emissions, increase operational energy efficiency, and increase our use of renewable energy, along with continued impact to businesses by the novel coronavirus disease 2019 (“COVID-19”), and the overall greening of the U.S. electricity grid caused our global emissions in 2021 to decrease compared to 2020.
C7. Emissions breakdowns

C7.1

(C7.1) Does your organization break down its Scope 1 emissions by greenhouse gas type?
Yes

C7.1a

(C7.1a) Break down your total gross global Scope 1 emissions by greenhouse gas type and provide the source of each used greenhouse warming potential (GWP).

<table>
<thead>
<tr>
<th>Greenhouse gas</th>
<th>Scope 1 emissions (metric tons of CO2e)</th>
<th>GWP Reference</th>
</tr>
</thead>
<tbody>
<tr>
<td>CO2</td>
<td>417802</td>

C7.9

(C7.9) How do your gross global emissions (Scope 1 and 2 combined) for the reporting year compare to those of the previous reporting year?

Decreased

C7.9a
(C7.9a) Identify the reasons for any change in your gross global emissions (Scope 1 and 2 combined), and for each of them specify how your emissions compare to the previous year.

<table>
<thead>
<tr>
<th>Change in emissions (metric tons CO2e)</th>
<th>Direction of change</th>
<th>Emissions value (percentage)</th>
<th>Please explain calculation</th>
</tr>
</thead>
<tbody>
<tr>
<td>Change in renewable energy consumption</td>
<td>Decreased</td>
<td>8.9</td>
<td>Renewable energy made up 662,544 MWh in 2021, compared to 254,858 MWh in 2020. This increase in renewable energy purchase resulted in a decrease of 196,823 tCO2e in our Scope 2 market-based method compared to 2020. The calculation is as follows: (-196,823 [Reduction in Scope 2 market-based method emissions attributable to renewable energy]) / (2,222,592 [Total of 2020 Scope 1 and Scope 2 market-based method emissions]) = -.089</td>
</tr>
<tr>
<td>Other emissions reduction activities</td>
<td>Decreased</td>
<td>10.2</td>
<td>During 2021, Comcast implemented multiple emissions-reducing initiatives that decreased our Scope 1 and Scope 2 market-based method emissions compared to 2020, including fleet reduction and efficiency initiatives and building energy efficiency improvements. The calculation is as follows: (-226,730 [Reduction in Scope 2 market-based method emissions attributable to activities other than renewable energy]) / (2,222,592 [Total of 2020 Scope 1 and Scope 2 market-based method emissions]) = -.102</td>

C10.2

(C10.2) Do you verify any climate-related information reported in your CDP disclosure other than the emissions figures reported in C6.1, C6.3, and C6.5?

No, we do not verify any other climate-related information reported in our CDP disclosure

C11. Carbon pricing

C11.1

(C11.1) Are any of your operations or activities regulated by a carbon pricing system (i.e. ETS, Cap & Trade or Carbon Tax)?

No, and we do not anticipate being regulated in the next three years

C11.2

(C11.2) Has your organization originated or purchased any project-based carbon credits within the reporting period?

Yes

C11.2a
(C11.2a) Provide details of the project-based carbon credits originated or purchased by your organization in the reporting period.

Credit origination or credit purchase
Credit purchase

Project type
Wind

Project identification
Our Sky business participates in voluntary carbon offsetting of unavoidable Scope 1, 2 and selected Scope 3 emissions to claim CarbonNeutral® Business and CarbonNeutral® Production certification. In 2021, these offsets were purchased from 22 wind projects in China. Since 2018, in addition to the offset portfolio, Sky supports further sustainable development such as improving local environments for nature and people, and supporting the planting of future natural carbon sinks.

Verified to which standard
CDM (Clean Development Mechanism)

Number of credits (metric tonnes CO2e)
3116077

Number of credits (metric tonnes CO2e): Risk adjusted volume
3116077

Credits cancelled
Yes

Purpose, e.g. compliance
Voluntary Offsetting

(C11.3) Does your organization use an internal price on carbon?
No, and we do not currently anticipate doing so in the next two years

C12. Engagement

(C12.1) Do you engage with your value chain on climate-related issues?
Yes, our suppliers
Yes, our customers/clients
Yes, other partners in the value chain
(C12.1a) Provide details of your climate-related supplier engagement strategy.

Type of engagement
Innovation & collaboration (changing markets)

Details of engagement
Run a campaign to encourage innovation to reduce climate impacts on products and services

% of suppliers by number
0

% total procurement spend (direct and indirect)
1.3

% of supplier-related Scope 3 emissions as reported in C6.5

Rationale for the coverage of your engagement
A portion of the spend and environmental impact at Comcast Cable is related to Residential Customer Premise Equipment (CPE) which requires electricity for power in customers’ homes. Comcast Cable has invited relevant CPE suppliers to participate in two Voluntary Agreements: The Set-top Box Voluntary Agreement and Small Network Equipment Voluntary Agreement, both hosted by The Internet & Television Association and CableLabs. The mission of the Voluntary Agreements is to improve the energy efficiency of set-top boxes and small network equipment. Comcast Cable works with these suppliers to implement best practices, procure sustainable goods, and ultimately create products that decrease the energy consumption of customer equipment. The rationale for the coverage of this engagement is that it covers all residential CPE suppliers, which are the suppliers relevant for this engagement. While this represents < 1% of all Comcast Cable suppliers based on the size of our total operations, it is inclusive of all suppliers of the Comcast Cable equipment which this initiative is focused on.

Impact of engagement, including measures of success
Energy consumed as a result of our residential customers using our products are sources of our Scope 3 carbon emissions. As a result, Comcast Cable’s technology team works with vendors to source efficient and low-carbon alternative CPE. Our technology team has collaborated with the respective set-top box suppliers to create new set-top box models that meet the standards set in the Set-Top Box Voluntary Agreement (VA). As a signatory of the VA, Comcast Cable pledged that ≥ 90% of set-top boxes purchased in 2021 would meet the Tier 3 efficiency levels outlined in the VA. This is the measure of success for this engagement, and we were able to meet that goal in 2021. We also annually measure the amount of energy savings we enable through our customers’ use of our CPE as a measure of impact. This VA, which has already saved consumers across all VA signatories $7 billion in energy costs and avoided 39 million metric tons of CO2 emissions through the end of 2019, has been extended through 2025 and will now include new, even more rigorous energy efficiency commitments starting in 2023. By the end of the extended terms of the VA, the total energy used by set-top boxes in the United States is projected to be only one-third of the energy used by set-top boxes in 2012 when the VA was initially signed.

Comment

C12.1b

(C12.1b) Give details of your climate-related engagement strategy with your customers.

Type of engagement & Details of engagement
| Collaboration & innovation | Run a campaign to encourage innovation to reduce climate change impacts |

% of customers by number
23

% of customer-related Scope 3 emissions as reported in C6.5

Please explain the rationale for selecting this group of customers and scope of engagement
Residential customers have the option to reduce their carbon footprint by opting to use a self-installation kit to initiate service. We offer this opportunity to new customers or current customers upgrading services to eliminate the need for a professional technician to drive to their home to install their new services - reducing the emissions from mobile combustion and saving money. Customers who opt for self-installation are not charged the pro-installation fees, giving them a financial incentive to choose this more convenient, and environmentally friendly, option. This opportunity is made available to residential customers setting up new services where it is technically possible for them to do a self-install. This includes the majority of new customers across our national footprint, including markets in the mid-Atlantic and Northeast (including Washington, DC, Philadelphia, New York, and Boston), Southeast (including Miami and Atlanta), Midwest (including Chicago, Detroit, Indianapolis, and Minneapolis/St. Paul), Mountain West (including Denver and Salt Lake City), California (including San Francisco and Sacramento), South West (including Houston) and Northwest (including Portland and Seattle). The % of customers engaged is calculated as the total number of customers opting to use self-installation kits in the given year divided by the total number of residential customer relationships at year end.

Impact of engagement, including measures of success
The impact of engagement is measured by tracking the percentage of new residential customers or current customers adding a new service that opt to self-install their equipment. Self-installation kits are available to residential customers setting up new services across Comcast Cable’s network footprint where it is technically possible for them to do a self-install. By opting to use a self-installation kit to initiate service, customers eliminate the need for a professional technician to drive to their home to install their new services - reducing the emissions from mobile combustion and saving money. Through our digital technology and customer support tools, including self-installation kits, we’ve eliminated 4.8 million truck visits from 2019 - 2021, saving more than 7.6 million gallons of gasoline and avoiding 67,000 metric tons of greenhouse gas emissions. The measure of success is for the self-install opt-in rate to meet or beat the budget target for the year. While the specific opt-in rate for self-installations is confidential, we measure and set targets for this rate, including as part of our annual budget and LRP process.

C12.1d
(C12.1d) Give details of your climate-related engagement strategy with other partners in the value chain.

Each year, we continue to work towards improving the energy efficiency of Comcast Cable products. In addition to our participation in the Voluntary Agreement for Set-Top Boxes, we also partner with manufacturers in our value chain to improve efficiency for gateways and other network devices.

Example of engagement with other partners in the value chain: As a signatory of the set-top box voluntary agreement (VA), Comcast Cable pledged that ≥90% of set-top boxes purchased in 2021 would meet the Tier 3 efficiency levels outlined in the VA. In order to accomplish this goal, we collaborated with other partners in the value chain, including Broadcom and Realtek, to meet this quota. We leveraged the expertise of leaders from Comcast Cable, Broadcom, and Realtek to create a solution to meet the Tier 3 efficiency levels. As a result of this collaborative effort, two innovative system-on-chip (SOC) devices were developed for use in our set-top boxes. Both set-top boxes are models of the XioOne; one using Broadcom SoC and the other using Realtek SoC. Both of these new models use less power than previous models. These important developments allow us to deploy set-top boxes that meet the rigorous energy efficiency levels outlined in the VA. These devices are deployed universally across our networks, and carbon emission savings will be tracked and reported annually. Additionally, these solutions increase the efficiency of existing infrastructure without the need for massive construction projects and accompanying incremental emissions.

(C12.2) Do your suppliers have to meet climate-related requirements as part of your organization’s purchasing process?

No, but we plan to introduce climate-related requirements within the next two years.

(C12.3) Does your organization engage in activities that could either directly or indirectly influence policy, law, or regulation that may impact the climate?

Row 1

Direct or indirect engagement that could influence policy, law, or regulation that may impact the climate

No

Does your organization have a public commitment or position statement to conduct your engagement activities in line with the goals of the Paris Agreement?

<Not Applicable>

Attach commitment or position statement(s)

<Not Applicable>

Describe the process(es) your organization has in place to ensure that your engagement activities are consistent with your overall climate change strategy

Our Government Affairs organization operates throughout our U.S. business footprint. Its activities include development and advocacy of public policy positions, lobbying, membership in a range of trade associations, participation in several intergovernmental associations, and partnerships with other companies in the cable, broadcast, and film industries and third-party organizations regarding public policy issues of concern to our business. The trade associations of which we are a member are principally those that are composed of companies in the cable, broadcast, and film industries, and are operated for the purpose of advancing the common business goals and interests of the member companies and their customers. Participation in these trade associations is subject to approval by the Chief Legal Officer. Our lobbying activity, undertaken directly or through participation in trade associations, is intended to favorably influence public policy on the wide range of issues that impact our businesses. These issues include legislation and regulation relating to video distribution services; Internet and high speed data services; telephony services; local and state cable franchising; broadcast and cable television programming and distribution; the motion picture industry; privacy; piracy; copyright; the Internet; certain international regulations; and a variety of other matters that affect Comcast more generally as a business, including tax, labor, antitrust, cybersecurity, and workplace safety. Our participation in trade associations, particularly those representing a range of industry sectors, comes with the understanding that we might not agree with every position held by the association or its other members. When determining whether or not to continue our annual membership in these organizations, we will consider whether there are any significant inconsistencies between the trade association’s positions and our positions on public policy issues that are material and core priorities for Comcast. If we deem such inconsistency to present a material risk to our company, we will engage with the association to address the matter.

Primary reason for not engaging in activities that could directly or indirectly influence policy, law, or regulation that may impact the climate

Other, please specify (See description above.)

Explain why your organization does not engage in activities that could directly or indirectly influence policy, law, or regulation that may impact the climate

Our Government Affairs organization operates throughout our U.S. business footprint. Its activities include development and advocacy of public policy positions, lobbying, membership in a range of trade associations, participation in several intergovernmental associations, and partnerships with other companies in the cable, broadcast, and film industries and third-party organizations regarding public policy issues of concern to our business. The trade associations of which we are a member are principally those that are composed of companies in the cable, broadcast, and film industries, and are operated for the purpose of advancing the common business goals and interests of the member companies and their customers. Participation in these trade associations is subject to approval by the Chief Legal Officer. Our lobbying activity, undertaken directly or through participation in trade associations, is intended to favorably influence public policy on the wide range of issues that impact our businesses. These issues include legislation and regulation relating to video distribution services; Internet and high speed data services; telephony services; local and state cable franchising; broadcast and cable television programming and distribution; the motion picture industry; privacy; piracy; copyright; the Internet; certain international regulations; and a variety of other matters that affect Comcast more generally as a business, including tax, labor, antitrust, cybersecurity, and workplace safety. Our participation in trade associations, particularly those representing a range of industry sectors, comes with the understanding that we might not agree with every position held by the association or its other members. When determining whether or not to continue our annual membership in these organizations, we will consider whether there are any significant inconsistencies between the trade association’s positions and our positions on public policy issues that are material and core priorities for Comcast. If we deem such inconsistency to present a material risk to our company, we will engage with the association to address the matter.
(C12.4) Have you published information about your organization’s response to climate change and GHG emissions performance for this reporting year in places other than in your CDP response? If so, please attach the publication(s).

**Publication**
In voluntary sustainability report

**Status**
Complete

</table>

## (C15.6) Have you published information about your organization’s response to biodiversity-related issues for this reporting year in places other than in your CDP response? If so, please attach the publication(s).

<table>
<thead>
<tr>
<th>Report type</th>
<th>Content elements</th>
<th>Attach the document and indicate where in the document the relevant biodiversity information is located</th>
</tr>
</thead>
</table>

## C16. Signoff

### (C16.1) Provide details for the person that has signed off (approved) your CDP climate change response.

<table>
<thead>
<tr>
<th>Row</th>
<th>Job title</th>
<th>Corresponding job category</th>
</tr>
</thead>
<tbody>
<tr>
<td>1</td>
<td>SVP Corporate Strategy &amp; Environmental Sustainability</td>
<td>Chief Sustainability Officer (CSO)</td>
</tr>
</tbody>
</table>

## SC. Supply chain module

### SC0.0
If you would like to do so, please provide a separate introduction to this module.

SC0.1

What is your company’s annual revenue for the stated reporting period?

<table>
<thead>
<tr>
<th>Row 1</th>
<th>Annual Revenue</th>
</tr>
</thead>
<tbody>
<tr>
<td></td>
<td>116385</td>
</tr>
</tbody>
</table>

SC1.1

Allocate your emissions to your customers listed below according to the goods or services you have sold them in this reporting period.

SC1.2

Where published information has been used in completing SC1.1, please provide a reference(s).

SC1.3

What are the challenges in allocating emissions to different customers, and what would help you to overcome these challenges?

<table>
<thead>
<tr>
<th>Allocation challenges</th>
<th>Please explain what would help you overcome these challenges</th>
</tr>
</thead>
</table>

SC1.4

Do you plan to develop your capabilities to allocate emissions to your customers in the future?

Please select

SC2.1

Please propose any mutually beneficial climate-related projects you could collaborate on with specific CDP Supply Chain members.

SC2.2

Have requests or initiatives by CDP Supply Chain members prompted your organization to take organizational-level emissions reduction initiatives?

SC4.1

Are you providing product level data for your organization’s goods or services?

No, I am not providing data

Submit your response

In which language are you submitting your response?

English

Please confirm how your response should be handled by CDP

<table>
<thead>
<tr>
<th>Please select your submission options</th>
<th>I understand that my response will be shared with all requesting stakeholders</th>
<th>Response permission</th>
</tr>
</thead>
<tbody>
<tr>
<td></td>
<td>Yes</td>
<td>Public</td>
</tr>
</tbody>
</table>
